

Ideation Phase
Empathize & Discover

Date	11 September 2026
Team ID	NA
Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	4 Marks

Empathy Map Canvas Details

Target Persona: Daily Urban Metro Commuter (e.g., Office Professional / Student)

1. What does he THINK AND FEEL?

- *Major preoccupations:* "Will I get stuck at the ticket counter and miss my scheduled metro?"
- *Worries:* Missing connection trains, losing physical tokens, and carrying exact currency change.
- *Aspirations:* Wants a seamless, contactless entry experience where a mobile QR pass gets scanned in under a second.
- *Core Feelings:* Annoyed by manual line bottlenecks; relieved when fare calculations and ticket delivery happen online.

2. What does he HEAR?

- *What colleagues/friends say:* "The queues at interchange stations like Ameerpet are unbearable during morning peak hours."
- *What station staff announce:* "Please keep exact change ready at the token dispensing counters."
- *What digital influencers say:* "Cashless UPI and paperless transit are the future of smart mobility."

3. What does he SEE?

- *Environment:* Crowded metro concourses with long queues snaking around physical ticket booths.
- *Turnstiles:* Automated Fare Collection (AFC) gates equipped with optical barcode/QR scanners.
- *Current Alternatives:* Broken token vending machines and slow manual ticket counters causing congestion.

4. What does he SAY AND DO?

- *Public attitude:* Expresses frustration when having to queue twice—first for buying tokens, then for gate entry.
- *Direct Actions:* Opens the ServiceNow Service Portal (/sp) on their mobile device to pre-book a pass.
- *Behavior:* Selects starting station, destination, and journey type, then pays via digital payment modes (UPI/Cards).
- *At Gates:* Displays the generated 2D QR token from the portal modal popup directly to the gate reader.

5. PAIN (Fears, Frustrations, Obstacles)

- *Wasted Commute Time*: Spending 15 to 20 minutes standing in line every day.
- *Token Vulnerabilities*: Easily dropping, misplacing, or damaging paper/plastic tokens.
- *Payment Friction*: Exact cash requirement and lack of seamless digital payment acceptance at booths.
- *Static Confirmations*: Online portals that only provide text receipts with no scannable gate entry codes.

6. GAIN (Wants, Needs, Measures of Success)

- *Zero Waiting Time*: Direct walk-through to station platforms without visiting ticket counters.
- *Accurate Fares*: Automated fare deduction and route-to-cost mapping for both single and return journeys.
- *Instant Digital Tokens*: High-contrast, scannable dynamic QR codes generated within an interactive modal (spModal).
- *Environmental Impact*: Completely paperless travel contributing to city sustainability.
